**For: Entrepreneurs, innovators, and Dreamers  
who wish to bring about a change for the  
better ... with the help of technology**

**Register: <http://venturelibrary.pandaform.com/pub/qszypl/new>**

**Registration requested as seats are restricted to 20**

## **About the talk:**

“Prediction is very difficult, especially if it's about the future” ... Niels Bohr  
Instead of trying to predict the future, we will lay out various possible future scenarios. We will first analyse the evolution of certain technologies that have great disruptive potential – **advanced materials, additive manufacturing, renewable energy, autonomous vehicles, advanced energy storage, genomics, mobile internet, cloud computing etc.**

Then we will discuss how the convergence of these disruptive technologies can radically transform our lives, our businesses and the national economy.

My aim is to help the audience to

- (a) learn about the recent changes in the technology landscape
- (b) accelerate convergence of these technologies by triggering future-oriented thinking and
- (c) visualize a future that is shaped by a whole new set of technology possibilities. We will apply this knowledge to visualize the future of urban mobility.
